

Import Data using Transform Maps (Spreadsheet)

Project Overview

Import Data using Transform Maps (Spreadsheet) is a ServiceNow-based project that demonstrates how data from a spreadsheet can be imported into ServiceNow using **Import Sets and Transform Maps**.

The project helps to understand how external spreadsheet data can be transferred, mapped, transformed, and stored in the required ServiceNow table.

1. Brainstorming & Ideation Phase

In this phase, the project idea was identified and discussed.

Idea

To create a simple process for importing spreadsheet data into ServiceNow using Import Sets and Transform Maps.

Main Concept

- Prepare data in a spreadsheet.
 - Upload the spreadsheet into ServiceNow.
 - Create an Import Set.
 - Create a Transform Map.
 - Map spreadsheet fields to ServiceNow table fields.
 - Transform and import the data.
 - Verify the imported records.
-

2. Requirement Analysis Phase

The requirements needed for the project were identified.

Functional Requirements

- Spreadsheet containing required data.

- ServiceNow instance.
- Import Set for temporary data storage.
- Transform Map for field mapping.
- Target ServiceNow table.
- Data transformation and validation.
- Imported records verification.

Software Requirements

- ServiceNow
- Web Browser
- Spreadsheet application such as Microsoft Excel or Google Sheets

Input

Spreadsheet containing structured data.

Output

Successfully imported records in the selected ServiceNow table.

3. Project Design Phase

The workflow of the project was designed before implementation.

System Workflow

Spreadsheet Data

Upload Spreadsheet

Create Import Set

Import Set Table

Create Transform Map

Map Source Fields to Target Fields

Run Transform

Target ServiceNow Table

Verify Imported Records

Main Components

1. Source Spreadsheet
 2. Import Set
 3. Import Set Table
 4. Transform Map
 5. Field Mapping
 6. Target Table
 7. Imported Records
-

4. Project Planning Phase

The project activities were planned in a step-by-step manner.

Phase	Activity
1	Identify the project requirement
2	Prepare spreadsheet data
3	Create Import Set
4	Configure Import Set Table
5	Create Transform Map
6	Configure field mappings
7	Run the transformation
8	Verify imported records
9	Test the project
10	Prepare documentation and demonstration

5. Project Development Phase

The project was implemented in ServiceNow.

Development Steps

1. Prepare the required data in a spreadsheet.
2. Open the ServiceNow instance.
3. Navigate to the Import Set functionality.
4. Upload the spreadsheet.
5. Create or select the Import Set Table.
6. Create a Transform Map.
7. Select the source table and target table.
8. Create field mappings between source and target fields.
9. Configure transformation rules if required.
10. Run the Transform.
11. Check the target table for the imported records.

Field Mapping Example

Spreadsheet Field ServiceNow Target Field

Name	Name
Email	Email
Phone	Phone
Department	Department

6. Project Testing Phase

Testing was performed to ensure that the imported data was correctly processed.

Test Cases

Test Case	Expected Result
Upload valid spreadsheet	Spreadsheet should be uploaded successfully
Create Import Set	Import Set should be created

Test Case	Expected Result
Create Transform Map	Transform Map should be available
Map source and target fields	Fields should be mapped correctly
Run Transform	Records should be transferred
Check target table	Imported records should be displayed
Invalid or missing data	Data should be identified or handled appropriately

Testing Result

The imported spreadsheet data was successfully transformed and stored in the selected ServiceNow target table.

7. Project Documentation Phase

The project documentation was prepared to explain the complete implementation process.

Documentation Includes

- Project title
- Project overview
- Requirements
- Project workflow
- Import Set configuration
- Transform Map configuration
- Field mapping
- Testing process
- Testing results
- Screenshots
- Final outcome

Screenshots of the ServiceNow configuration and imported records can be added to this GitHub repository.

8. Project Demonstration Phase

The completed project can be demonstrated by showing the complete data import process.

Demonstration Steps

1. Show the source spreadsheet.
2. Show the ServiceNow Import Set.
3. Show the imported source data.
4. Show the Transform Map.
5. Show the field mappings.
6. Run the Transform.
7. Open the target ServiceNow table.
8. Show the successfully imported records.

Final Outcome

The project demonstrates how spreadsheet data can be efficiently imported into ServiceNow using **Import Sets and Transform Maps**. It provides a structured method for transferring external data into ServiceNow tables with appropriate field mapping and transformation.

Technologies Used

- **Platform:** ServiceNow
 - **Data Source:** Spreadsheet
 - **Tools:** Import Sets and Transform Maps
 - **Browser:** Google Chrome / Microsoft Edge
-

Conclusion

The **Import Data using Transform Maps (Spreadsheet)** project demonstrates the process of importing spreadsheet data into ServiceNow. By using Import Sets and Transform Maps, source data can be mapped and transformed into the required target table in a systematic way.
